

SAMEEKSHA MAHESH

Davis, CA | +1 (530)-760-0509 | sammahesh@ucdavis.edu | [LinkedIn](#) | [GitHub](#)

SUMMARY

M.S. Computer Science candidate at UC Davis with hands-on experience building scalable, cloud-native Java and Spring Boot microservices that reduced API response times by 20%. Designed full-stack invoicing platform with RBAC and OCR-based bank ID system improving efficiency and data insights. Seeking a Software Developer Internship to leverage Java, Python, AWS and Docker skills in building high-performance solutions.

EDUCATION

University of California, Davis

M.S., Computer Science

2025 - 2027

Davis, CA

- **Coursework:** Distributed Database Systems, Analysis of Software Artifacts

Dayanand Sagar College of Engineering

B.E., Computer Science & Engineering

2020 - 2024

Bengaluru, India

- **GPA:** 3.97

EXPERIENCE

Perfios Software Solutions Pvt Ltd

Software Development Engineer

Apr 2024 - Sep 2025

Bengaluru, India

- Redesigned RESTful microservices in Java and Spring Boot for core payment workflows, optimizing database queries and indexing to cut API response time by 20%, improving overall system efficiency.
- Developed a full-stack invoicing platform using Node JS with role-based access control (RBAC), featuring automated reporting and monitoring, which enhanced internal productivity, operational efficiency, and accelerated data insights.
- Developed and implemented a bank identification system using OCR for logo and text recognition of international banks, conducting data analysis on recognition patterns to accurately identify 35% of banks and improve search and retrieval efficiency.
- Containerized and deployed services using Docker and established CI/CD pipelines via GitHub Actions and Jenkins, improving deployment reliability and reducing release cycles.

Brane Enterprises Pvt. Ltd

Automation Intern

Jun 2022 - Jan 2023

Bengaluru, India

- Automated API workflows using Postman, integrating them into the test pipeline and conducting data analysis on test results, which increased reliability and reduced manual testing effort by 15%.
- Collaborated with developers to optimize client-facing automation tools built with Node JS and resolve client-side issues, enabling timely project delivery within Agile timelines and improving platform performance.

PROJECTS

Fake News Detection System

- Leveraged ensemble ML models and NLP techniques to classify news credibility, achieving 92% accuracy and demonstrating ability to implement AI-powered solutions. Designed an interactive interface for article submission and real-time credibility scoring, enhancing user engagement.

Intelligent Traffic Violation Detection System

- Developed a real-time traffic violation detection system for helmet non-compliance, signal violations, and mobile phone usage using deep learning and computer vision (YOLOv3/v5/v8 + SORT).
- Integrated OCR (Tesseract) for automatic license plate recognition and implemented a Streamlit interface for video upload, violation visualization, and record storage.
- Achieved 73% mAP50 on validation datasets, enabling accurate and efficient monitoring of traffic violations.

Secure Healthcare Portal

- Engineered a secure, cloud-based telemedicine platform for encrypted storage and sharing of medical records between patients and doctors, ensuring confidentiality, integrity, and reliable access.
- Implemented RSA-based encryption, key management, and two-factor authentication, and developed Flask REST APIs for secure data transactions, achieving 100% data confidentiality in tests.

TECHNICAL SKILLS

- **Languages:** Java, Python, C, JavaScript, Go (Basic)
- **Frameworks & Tools:** Git, GitHub, Spring Boot, REST APIs, Microservices, OCR, Elasticsearch, Wireshark, Postman, Node JS
- **Cloud / Devops:** AWS, CI/CD, Docker, Jenkins, Linux
- **Databases:** MySQL, PostgreSQL, MongoDB, SQL
- **Concepts:** System Design, Distributed Systems, Artificial Intelligence, Data Structures & Algorithms, Cybersecurity, Data Analysis
